PROFESSIONAL SUMMARY

Dedicated AI Data Annotation and Data Collection Specialist with over 2 years of experience supporting artificial intelligence and machine learning projects. Skilled in data annotation, transcription, translation, and dataset collection for AI model training. Experienced in labeling text, audio, and image datasets while maintaining high accuracy and quality standards. Strong computer proficiency and ability to follow complex annotation guidelines while working in remote AI data environments.

TECHNICAL SKILLS

Programming Language: Java, JavaScript, TypeScript, HTML, CSS, Python, .NET, PHP
Problem Solving & Algorithms: Data Structures, Time & Space Complexity Analysis, Algorithm Optimization, Debugging Workflows, Root Cause Analysis
Software Development: React.js, Node.js, Angular, Spring Boot, Spring Batch, RESTful APIs, Microservices Architecture, MVC Architecture, Component-Based UI Architecture, Responsive Design, GUI Design, Object-Oriented Programming, Design Patterns, Code Optimization
Database & Data Technologies: PostgreSQL, MariaDB, MongoDB, SQL, Data Modeling, Query Optimization
Tools & Platforms: Git, Visual Studio, VS Code, Postman, Azure, Jupyter Notebook, AWS, Docker, Kubernetes, Jenkins, CI/CD Pipelines, GitHub Actions, UNIX, Linux, Application Deployment, JMeter, SonarQube, Networking, Nexus
Data & AI Technologies: OpenAI, Machine Learning, Artificial Intelligence, Data Structures

EXPERIENCE

Graduate Teaching Assistant — Aug 2025 – Present

• Assisted in delivering, managing labs and coursework on distributed systems, backend architectures, and performance optimization, mentoring 300+ students in Java, database systems, REST API design, CI/CD pipelines, and production-grade backend development.

• Facilitated hands-on database and development environment setup, guiding students through SQL Server installation/configuration on macOS and Windows, troubleshooting system and connectivity issues, and ensuring practical, production-ready application integration.

• Provided structured technical mentorship on algorithm logic, time/space complexity, optimization strategies, database schema design, query optimization, and scalable backend–frontend API integration.

Professional Experience

Software Development Engineer - II — Sep 2023 – Nov 2024

• Ensured seamless customer banking journey by owning end-to-end delivery of core services including Supplementary Card, Fraud Dispute, Loan Servicing Account, and identity modernization; developed and deployed Spring Boot microservices using hexagonal architecture, integrated Kafka, Madame, BAU services, Kong, and Kony, resulting in reliable, scalable customer experiences.

• Engineered SG Digital Fraud Dispute microservices, enabling customers to block cards, report fraudulent transactions, and request replacements via automated workflows, driving a 25% increase in digital application usage.

• Led CI/CD pipelines, implemented automated functional, load, soak, and chaos testing with JMeter, and restored high-priority production services during P1/P2 incidents using JIRA, Kibana, PCF, SWEB logs, and WinSCP.

• Enhanced platform quality, security, and compliance by addressing Nexus IQ and SonarQube issues, performing database updates, and enforcing banking security standards, achieving zero compliance findings during audits.

Software Development Engineer - I — Jul 2022 – Sep 2023

• Delivered backend microservices and REST APIs for Singapore Supplementary Credit Card applications, enabling customers to apply for additional cards via mobile banking, driving a 30% increase in applications.

• Stabilized applications by resolving SL3/SL4 defects, addressing Nexus and SonarQube security findings, and reducing defect leakage into UAT and Production.

• Translated complex business requirements into modular, scalable services, improving integration reliability and release predictability.

• Optimized CI/CD pipelines across SIT, UAT, PAT, and Production using Jenkins and JFrog, implementing automated Black-box, functional, load, soak, and chaos testing with JMeter (80% test coverage, 30% reduced execution time).

Software Developer — Aug 2021 – June 2022

• Started career contributing to backend and web development using Spring Boot within Agile/Scrum teams, delivering features for internal and customer-facing applications.

• Assisted with Azure cloud deployments, functional testing, and documentation, improving release readiness and overall code quality.

• Worked closely with senior engineers to understand enterprise workflows, standards, and production support processes, contributing to workflow and process improvements.

• Supported troubleshooting, system reimaging, onboarding, and remote support, enhancing operational efficiency and cybersecurity.

ACADEMIC PROJECTS

AI-Powered Resume Analyzer & Job Matching Platform — Jan 2025 – Apr 2025

Designed and implemented a backend service to parse resumes and extract key information such as skills, experience, and education, storing structured data in SQLite for persistent analysis.

Developed an AI-based matching engine using NLP techniques to score resumes against job descriptions and rank candidates based on matching percentage.

Implemented automated resume scoring to objectively quantify alignment with job requirements, enabling efficient and data-driven candidate evaluation instead of manual review.

Enterprise Employee Management System — Aug 2021 – Nov 2022

Developed an Enterprise Employee Management System using Spring Boot 3, Spring Data JPA, and MySQL, enabling managers to efficiently perform CRUD operations on employees and departments. Implemented secure authentication and authorization using JWT and role-based access control (RBAC) with Spring Security 6 to manage admin login, logout, and protected resources. Built a responsive frontend using JavaScript, Bootstrap, and Axios, integrating RESTful APIs to handle and organize large-scale employee data across

---

EDUCATION

Stanford University, January 2025 – Present

Master of Science, Information Technology

GPA: 4

Stanford University, May 2022

Bachelor of Engineering, Computer Science and Engineering

GPA: 3.2

CERTIFICATIONS

AWS Academy Cloud Foundations, Completed 2025
